

Effortlessly handleless

Push to open Silent for hinged doors

Handleless furniture design perfected by practical convenience. Push to open Silent is the new benchmark for impressive, user friendly functionality: handleless door opening combined with silent and soft closing. Perfectly complementing this, Push to open Silent is also available for drawers.

Push to open Silent combines two sought after convenience features: handleless opening and silent, soft closing for furniture doors. The opening cycle is all mechanical, taking place in response to a light press on the front panel. The tried and proven Silent System on the hinges reliably closes the door as the push rod retracts to the home position once the door is opened. This is done by battery power, making any wiring unnecessary.

Push to open Silent for hinged doors is suitable for all common door sizes and cabinet body designs, including angled applications. Optionally available in anthracite, white and grey, the enclosure harmonises with virtually any design of furniture.
