

## Intuitive user convenience for purist

### XXL furniture design

#### Quadro drawer runners with synchronised

#### Push to open mechanism

**Quadro** drawer runners with Push to open gently open handleless wooden drawers as well as the Hettich *InnoTech* and *InnoTech Atira* drawer systems in response to a light press on the front panel. To permit activation of large drawers from anywhere on the front panel, the **Quadro** full extension runners are factory configured for installing synchronisation.

Anyone looking to push beyond the limits of today's furniture design will find the answer in the synchronised Push to open mechanism: making it easy to feature exceptionally wide front panels that interconnect several drawers. The synchronisation system connects all runners, synchronously activating them across centre panels or carcass sides.

The optional, easily clipped in synchronisation bar with fitted adapters can be cut to any carcass width without a problem while connectors reduce offcut to a minimum. This provides an effective way of combining on trend handleless, large format furniture design with practical convenience.
