

Cool fittings for extreme conditions

Fittings program for the refrigeration sector

As an innovative partner to the white goods industry, Hettich develops solutions with expertise in technology for furniture. As a result, electrical appliances can also be equipped universally with Hettich fittings and their convenience features. The product portfolio for the refrigeration sector includes convenient, silent fitting solutions for diverse refrigerators and freezers: for fitted devices with fixed doors or sliding doors through to free standing refrigerators and freezers.

Quadro Compact runner system

The *Quadro Compact* runner system ensures full, convenient access and a good overview of the stored foodstuffs in crisper compartments and freezer compartments. Thanks to the full extension runners, foodstuffs will no longer be forgotten. *Quadro Compact* is impressive thanks to the smooth, silent running performance, exceptional stability and a controlled, quiet closing operation with *Silent System*.

The runner system is modular in design, making an upgrade of various refrigerator series easy to implement. The product range covers the 20, 40 and 80 kg weight categories: *Quadro Compact FE 20* for small compartments, *Quadro Compact FE 40* for large crisper compartments up to 40 kg and *Quadro Compact HD* for large pot-and-pan drawers up to 80 kg. The advantage: the entire refrigerator and freezer can be equipped with one single range of runners. All *Quadro Compact* drawer runners are hidden from view and cater to the trend towards integrated functions.

Innovative fitting solutions for refrigerator doors

K hinges are for use in refrigerators and freezers with fixed doors and open the door widely for a simple and quick access to food-stuffs stowed in the door and ensure a controlled, reliable closing. The product solution *Silent System* from Hettich also offers this convenience for sliding doors. Implementation is simple and clever: the *Silent System* unit is installed in place of a door glide.

Easys electromechanical opening assistance can now also extend handleless kitchen design to refrigerator applications. *Easys* responds to a press of the finger on the front, opening the doors by a short distance so that it can be opened all the way by hand. The system closes the door automatically if it is left open for too long. *Easys* can be installed in both sliding door devices and devices with fixed doors.

The following picture material is available for downloading from www.hettich.com:

Along with full access to the content of refrigerators and freezers, the *Quadro Compact* runner system also offers a convenient, quiet closing operation. Photo: Hettich

Even refrigerator doors that are loaded with up to 70 kg are closed quietly and reliably with the *K08* hinge. Photo: Hettich
