

Slide system for the upper dishwasher basket. **Prisma**

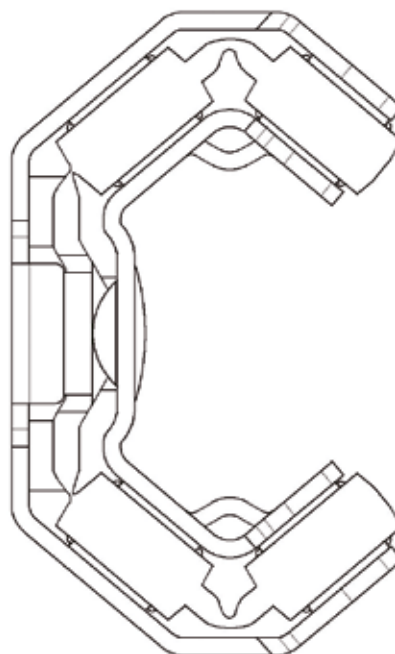

- Materials and design are dishwasherproof
- Precise and smooth sliding action
- High lateral stability due to Prism geometry
- Self-cleaning profile

Prisma

Dishwashers need to withstand large amounts of stress and strain, not only with respect to frequency of use but also to loading. Prisma slides from Hettich offer perfect performance and incredibly smooth running action as they were developed specifically for white goods.

The use of roller barrels provides Prisma slides with running properties that far exceed those of the roller runner systems commonly found on the market today. The combination of stainless-steel profiles and plastic rollers makes the system completely grease-free.

The high-volume slide profile with cut-out-sections is particularly user-friendly as foreign matter is automatically removed during the dishwashing cycle. The prism geometry also ensures extremely high lateral stability.

Technical specifications

| Function | Specification |
|-------------------------------|--|
| Material / surface of profile | Stainless steel |
| Max. load capacity | up to 29 lbs for 100 000 cycles Static load: 44 lbs |
| Temperature range | Operating temperature: up to 167°F |
| Corrosion test | Corrosion-resistance |
| Lubrication | Self-lubricating |
| ROHS | Compliant |
