

## **A sliding door system for every application**

### **SlideLine 55 Plus**

**The *SlideLine 55 Plus* sliding door fitting from Hettich provides design flexibility as well as practical added value for the user.**

The *SlideLine 55 Plus* sliding-door system can be used in any application for dining-rooms, living-rooms and bedrooms as well as in hotels, shops and offices. Whether as sideboards, filing cabinets or wardrobes: sliding-door units clearly have the edge in terms of sleek lines, new materials and individually tailored design options.

Convenience is provided by the fully integrated soft-closing function because it closes the doors quietly and gently without compromising on storage space as no additional component is required. Noticeable added value not only comes from rollers that ensure smooth, quiet running action but also from the closing mechanism that slows the doors down as they shut. A spacer protects the doors from damage.

The two-track *SlideLine 55 Plus* sliding door fitting takes every effort out of moving door formats in heights of 700 mm to 1,500 mm and widths of 400 mm to 800 mm. The ease of door hanging is particularly important for the RTA segment. Without the need for tools, adjusting door height at a thumbwheel couldn't be easier and guarantees perfect gap alignment. Suitable for wooden doors and designed for fronts with inset doors, the fitting also permits overlay door options.
