

Improved Designs – Improved Performance and Durability

Grant Box Track Systems for Sliding Doors

Designed to meet the needs of both residential and commercial applications, the improved Grant Box Track Sliding door systems provide real solutions for installations that require the movement of heavy panels, space dividers and large doors up to 500 lbs.

Grant introduces improved carriers and tracks, new mounting hardware, and improved wall mount systems for our Grant SD, HD, and XHD track series.

All three of the Grant Box track series now feature high quality aluminum carriers with precision ball bearing wheels for superior performance. The new aluminum top plate features easy side load mounting. Improved aluminum box tracks and end stops hide the hardware and offer outstanding performance and durability.

The Grant XHD box track system now can accommodate both header mounted and wall mounted design applications along with the Grant SD and Grant HD series. A newly designed continuous aluminum wall mount bracket mounts behind the track without any visible brackets for a clean and elegant appearance. Fascia options are available for all three series.

Grant also introduces a new low profile mounting option. The low profile mounting option minimizes the gap at the top of the door
