

Wooden drawer perfection

Quadro with 4D drawer front adjustment from Hettich

The *Quadro* bottom mounted drawer runner brings a look of elegance and perfect performance to any wooden drawer. Complementing the line up with a 4D front panel adjustment capability, Hettich notches up the *Quadro* range. It guarantees perfect gap alignment while providing maximum flexibility in furniture design.

The *Quadro* 4D adjustment capability lets you adjust drawer fronts of frameless and faceframe cabinets vertically, laterally and in depth and tilt all as standard. This also provides the perfect solution to realizing large size drawer fronts with narrow gaps. The adjusting mechanisms are easily accessible and, with a different surface feel, easy to tell apart. This makes adjustment fast, straightforward and intuitive.

Suiting any application, *Quadro* drawer runners give furniture and kitchen manufacturers the perfect answer to meeting any demand in furniture design without having to make any change to wooden drawer or cabinet side. From slide on partial extension runner and full extension runner to full extension runner with 4D front panel adjustment. The same applies to the full range of functions from self closing *StopControl* and *Silent System* to the Push to open mechanism for handleless drawer fronts.

As such, *Quadro* gives furniture and kitchen manufacturers an unequalled range of options for differentiating between product lines while guaranteeing maximum efficiency in production. *Quadro*
